FH AV System Instructions
for
Hooking Up
Notebook Computers

1. Attach SVGA cable to notebook computer.
2. Attach Audio Cable to notebook computer.
4. Turn on computer from “cold” state; not stand by or hibernation.
5. Allow computer to boot up and it should lock up to projector.

If both units have been on for a while and there is no projected image, you may have to manually switch to the projector. This is usually done by holding down the “function” key and an “F x”. X is a number and varies from model to model. It’s usually accompanied by a symbol of a “screen”. You may have to toggle a few times to get an image both on the notebook screen and projector.

6. The audio on the AV System is muted by default. Use the up arrow to raise the volume.

   If there is no sound, you may have to raise the volume on the notebook computer as well.

7. To shut down, hold the “Power” button down until shut down is attained.
